Negotiation is a process of cooperative decision-making between parties concerning the

resolution of a common dispute. The goal of negotiation is to develop a settlement that is acceptable to both parties. One way to achieve this is to ensure disputants take responsibility for their outcomes and control the disputation process. Most current systems have chosen to model the negotiation process by representing progress made within a negotiation. In this paper we focus on modelling the trade-o ...

6 Application models: Client-system collaboration for legal corpus selection in an online production environment

Jack G. Conrad, Joanne R. S. Claussen

June 2003 **Proceedings of the 9th international conference on Artificial intelligence and law**

Full text available:  [pdf\(239.10 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#)

The continued growth of very large data environments such as Westlaw and Dialog, in addition to the World Wide Web, increases the importance of effective and efficient database selection and searching. Current research focuses largely on completely autonomous and automatic selection, searching, and results merging in distributed environments. This fully automatic approach has significant deficiencies, including reliance upon thresholds below which databases with relevant documents are not search ...

By nature, the faculty of the University of Southern California School of Social Work are not users of technology for teaching. Most (not all!) use email, but many have difficulty sending or receiving attachments. When I came to the School, I was handed the task of helping a faculty, who are essentially people oriented, begin to use and embrace technology for the delivery of instruction.

This paper will explore how the use of technology for teaching has been increasing as the result of ...
